

Build and govern AI agents faster with a unified, transparent, and trusted experience

Easily create personalized AI agents with end-to-end AI lifecycle governance to automate and accelerate your work

According to [Gartner](#), at least 30% of GenAI projects will be abandoned after PoC by 2025, due to poor data quality, inadequate risk controls, escalating costs or unclear business value. Aside from the technology concerns, government policies are also influencing how we leverage AI in the workplace. For example, the EU Artificial Intelligence Act imposes a fine of €35M or 7% of annual turnover for noncompliance with EU AI Act. According to a [Harvard Business Review report](#), 79% of senior IT leaders reported concerns that these technologies bring the potential for security risks, and another 73% are concerned about biased outcomes. Yet less than 30% of CROs and CFOs say regulatory and compliance risks are being sufficiently addressed in their organizations, reports a [study by IBM Institute for Business Value](#).

Together, **watsonxOrchestrate** and **watsonx.governance** empower leaders to develop enduring and accelerated consumer trust with your brand by building, governing and scaling AI agents with confidence. Applying governance to AI agents and assistants mitigates reputation, revenue, and operational risks, and ensures compliance with policies and regulations at an accelerated pace.

With IBM watsonx Orchestrate and watson.data organizations can **build, manage, monitor** and **govern AI agents** built on models from IBM, open-source communities, and other providers. Using watsonx Orchestrate's **low-**

code/no-code integrations and **pre-built templates** optimized for business use cases, watsonx.governance automatically identifies unregistered AI deployments and triggers governance workflows across product, risk, compliance and security stakeholders. It **proactively detects and mitigates AI risks** and identifies relevant and changing regulations across AI processes and workflows, ensuring your AI assistants and agents are providing correct and compliant responses.

With watsonx Orchestrate and watsonx.governance, your organization can:

- Govern any AI, anywhere with one unified experience
- Evaluate AI models in minutes
- Accelerate AI deployment with safety and transparency
- Streamline compliance and regulation efforts
- Build responsible AI workflows
